

SQL Question Paper-SET A

1st Table Name: Employee

EmpID	EmpName	Department	Salary	JoiningDate
101	Amit	HR	45000	2022-01-15
102	Neha	IT	70000	2021-05-10
103	Rahul	Finance	65000	2020-08-20
104	Priya	IT	80000	2019-11-05
105	Karan	HR	50000	2023-03-12

2nd Table Name: Orders

OrderID	CustomerName	Product	Amount	OrderDate
1	Raj	Laptop	55000	2024-01-10
2	Simran	Mouse	800	2024-01-15
3	Raj	Keyboard	1500	2024-02-01
4	Aisha	Laptop	60000	2024-02-10
5	Simran	Monitor	12000	2024-03-05

By Referring 2 Tables, Solve the Following Questions

1. Show unique department names from the Employee table.
2. Display the details of employees who belong to the IT department and have a salary greater than ₹60,000.
3. Display only Employee Name and Salary from the Employee table.
4. Define SQL & Provide its 3 Applications
5. Find employees whose names start with the letter 'P'.
6. Display all employees sorted by salary in descending order.

7. Find the 3rd Maximum salary from the Employee table.
8. Display employees who joined after 1st January 2021.
9. Explain SubQuery and Give its Example by referring it to any Table
10. Find all orders where the amount is greater than the average order amount.
11. Write a query to identify duplicate customer names in the Orders table.
12. Write a query to display all records from the Order table.
13. Display the unique department names that have at least one employee earning more than ₹50,000.
14. Using Employee and Orders tables, create your own JOIN query to display:
 - Employee Name
 - Department
 - Customer Name
 - Product Purchased

(Assume a common key exists between the tables.)

15. Difference Between INNER JOIN and FULL JOIN
16. Explain Constraints and Types of it with proper Examples
17. Difference Between Primary Key and Foreign Key
18. Explain DDL, DML, DCL
19. Explain Difference between DROP, TRUNCATE & DELETE with Proper Examples
20. Difference between SQL and MySQL
